

Lake Michigan Water Connection Update

The Village is nearing completion and connection to the Lake Michigan water supply. Here is an update as of 11-9-17:

- CLCJAWA (Central Lake County Joint Action Water Agency) has installed their watermain and metering station at the Village's site at the west end of Falling Waters Blvd.
- Lake Michigan water is now available to initiate the Village's startup process. The Village's Pumping Station and Reservoir are ready to accept the new water supply.
- Moving forward, the reservoir will be slowly filled and chlorination will begin in the next week. When water samples are approved, pressure testing of the 3 pumps and internal piping will be completed by Manusos Gen. Contracting, the company that built the two structures.
- Once the internal water piping systems and reservoir are ready, the Village's telemetry and monitoring system will require a prefinal check to accommodate the change in water delivery from our local wells to the CLCJAWA water system.
- Village staff will continue to monitor water quality though the initial startup.
- After all startup procedures are completed, Lake Michigan water will begin to be distributed into the Village's system. We will notify residents when Lake Michigan water will be delivered to them.

Please contact the Village Hall (847-356-8252) if you have any concerns or questions.
