

For the past 3 weeks, Public Works has been blending Lake Michigan Water into your water distribution system. Based on ambient temperatures, existing water pipe temperature, and the temperature of the receiving water; we proceeded with caution to minimize possible disruptions or water related issues. Although some water related issues were reported and have been in isolated areas; most residents have not experienced problems with the blending process. As of 12/11/2017 at 1:18 PM, Public Works has completed the blending and are providing 100% Lake Michigan water to your residence or businesses.

We would like to extend our appreciation for your patience over the past 3 years of construction. During this construction period the Village work included:

- Upgrading 4.2 miles of existing water main
- Installing 5.2 miles of water main in areas that did not have access to Village water
- Installing a interconnect between Mallard Ridge Subdivision and Hickory Court to improve flow
- Installing a interconnect between Mallard Ridge Subdivision and Tower 1 to improve flow
- Installing a interconnect between Jefferson Drive and the Waste Water Treatment Facility to provide a looped system
- Erected a 1,000,000 gallon reservoir
- Constructed the Susan Lahr Lake Michigan Water Receiving Station

Residents may experience minor water issues as the distribution system becomes acclimated to Lake Michigan water. These issues will subside as we progress through the upcoming months. If you have specific questions about the water quality you can visit <http://www.clcjawa.com/water-qualityor> . Again and as always; we appreciate your patience and understanding as we move forward
