### **Bio-Solids Removal and Land Application**

**Lindenhurst, Illinois** – Stewart Spreading has begun hauling bio-solids from the Waste Water Treatment Facility to the farmer's field west of Interstate 94. This operation should take approximately 2 days. Resident's may experience an odor during the operation.

We generate approximately 1,200 cubic yards of dry sludge annually and provide this sludge to a local farmer to be used as nutrients for their crops. We produce Class B sludge that can only be applied to fields that grow crops for livestock. This removal occurs annually and does not cause any disruption in service to the residents.

Any questions or comments may be addressed by calling the Village Hall at 847-356-8252.
