Bio-Solids Removal and Land Application
Wednesday, December 1, 2021
Stewart Spreading – Bio-Solids Hauling

Stewart Spreading will begin hauling bio-solids from the Village of Lindenhurst Wastewater Treatment Facility to a farm in McHenry, IL. This operation should take approximately 2 – 3 days. Residents living adjacent to the Wastewater Treatment Facility may experience an odor during the operation. Our plant generates approximately 1,200 cubic yards of dry sludge annually, and this dry sludge is hauled to a farm outside of the community to be used as nutrients for their crops. The Village produces Class B sludge that can only be applied to fields that grow crops for livestock. Sludge removal does not impact regular wastewater treatment operations. Any questions may be addressed by calling the Village Hall at 847-356-8252.
